EXPERIENCE

Data Science Intern, One Call - *Jacksonville, FL*

May 2025 - August 2025

Returned for a second year to the same team, designing and deploying an LLM-powered automation to replicate and surpass clinical reviewer decision-making, delivering significant cost savings and operational efficiency across healthcare workflows.

- Processed 23,000+ medical reports in 12 hours (vs. 3.7 years manually) $1.3M in cost savings outperforming manual reviewers using few-shot learning and prompt engineering for surgical classification
- Conducted time studies and shadow sessions with clinical, operations, and engineering teams to map manual workflows, translating findings into pipeline design and communicating KPI insights to leadership
- Built Tableau KPI dashboards to track automation performance for leadership, integrating the LLM pipeline across Azure OpenAI API, Databricks, Snowflake, and Azure Portal with end-to-end logging and monitoring
- Developed APIs with FastAPI, implementing tokenizers, and error handling; built Pydantic models for data integrity

Tools used: Azure OpenAI API, FastAPI, Databricks, Snowflake, Azure DevOps, Pandas Excel PySpark, scikit-learn, Pydantic, Tableau

Data Science Intern, One Call - *Jacksonville, FL*

May 2024 - August 2024

Evaluated and updated outdated automation processes by analyzing performance metrics, identifying inefficiencies, and implementing Optimizations.

- Converted UiPath bot logic into optimized query – 38% to 88% hit rate improvement
- Streamlined healthcare referral/claims – 70% reduction in manual file reviews
- Optimized review process for efficient resource allocation

Tools used: SnowFlake, DataBricks, Teams, Visual Studio Code, Excel, Tableau, Lucid, UiPath, SharePoint

PROJECTS

4SeamMetrics — *BaseBall Analysis Hub*
Building a baseball analytics platform integrating live API data, LLM workflows, and custom statistical analysis. Currently in early development — involves data collection, cleaning, exploratory analysis, visualization, and predictive modeling across structured datasets using Python and Pandas.
🔗 GitHub | 🤖 Project Page

MISHI — *Community Web App for Stray Cats*

Developed a full-stack React/Firebase web app with Google Maps API for stray cat tracking and fostering. Implemented role-based authentication, location pinning, resource sharing,, and OAuth-enabled account management. Integrated secure Firestore rules.

🔗 GitHub | 📁 Drive

Room On Fire — *Magazine*

Platform for Music, Fashion, Art, and Cinema topics using SQL database and web development skills, implementing account creation, commenting systems.

EDUCATION

Masters in DataScience
NYC — CUNY SPS
Expected: Spring 2028

Bachelors in Computer Science
NYC — Queens College CUNY
December 2025

Associates in Computer Science
NYC — BMCC CUNY
June 2023

SKILLS

- Python
- R
- CPP
- SQL
- NumPy
- JavaScript
- Pandas
- Pyspark
- Swift
- Matplotlib
- LLM Development
- Prompt Engineering
- Few-Shot Learning
- Statistics
- DataBase Management
- Cloud Data
- API Development
- Process Optimization
- Web Development
- Automation
- **Bilingual**: English/Spanish

AWARDS

- National Science Foundation Scholarship
- Transfer Honors Scholarship
- Steven L. Gerard Memorial Endowment Fund
